Operation Guide 4335 4348

Getting Acquainted
Congratulations upon your selection of this CASIO watch. To get the most out of your purchase, be sure to read this manual carefully.

Warning!
- The measurement functions built into this watch are not intended for use in taking measurements that require professional or industrial precision. Values produced by this watch should be considered as reasonably accurate representations only.
- The measurement range of the Tide/Moon Data Mode is limited to a certain range of values. This watch is not intended for use in calculations for scientific purposes.
- The measurement range of the Tide/Moon Data Mode is limited to a certain range of values. This watch is not intended for use in calculations for scientific purposes.
- The measurement range of the Tide/Moon Data Mode is limited to a certain range of values. This watch is not intended for use in calculations for scientific purposes.
- The measurement range of the Tide/Moon Data Mode is limited to a certain range of values. This watch is not intended for use in calculations for scientific purposes.
- The measurement range of the Tide/Moon Data Mode is limited to a certain range of values. This watch is not intended for use in calculations for scientific purposes.

General Guide
- Press [C] to change from mode to mode.
- In any mode, press [L] to illuminate the display.

Timekeeping Mode
- Use the Timekeeping Mode to set and view the current time and date. This watch features separate digital and analog timekeeping. The procedures for setting the digital time and analog time are different.
- In the Timekeeping Mode, press [B] to toggle between the thermometer screen and the temperature tendency screen.

Timekeeping
- Use the Timekeeping Mode to set and view the current time and date. This watch features separate digital and analog timekeeping. The procedures for setting the digital time and analog time are different.
- In the Timekeeping Mode, press [B] to toggle between the thermometer screen and the temperature tendency screen.
- The tide graph shows tidal movements for the current date in accordance with the current time as kept in the Timekeeping Mode.
- The Moon phase indicator shows the current Moon phase in accordance with the current time as kept in the Timekeeping Mode.
- See “Thermometer” for details about the thermometer screen and temperature tendency graph.

Important!
- Be sure to configure the current time and date, and your Home Site data (data for the site where you use the watch) correctly before using the functions of this watch.

Setting the Digital Time and Date
- Use the Timekeeping Mode to set the digital time and date. This watch is preset with UTC differential values that represent each time zone around the globe. Before setting the digital time, be sure to set the UTC differential for your Home Site, which is the location where you normally will be using the watch.
- Note that World Time mode times are all displayed based on the time and date settings you configure in the Timekeeping Mode.
- Be sure to configure the correct UTC differential for your Home Site before configuring any other settings.
- Note that World Time mode times are all displayed based on the time and date settings you configure in the Timekeeping Mode.

To set the digital time and date
1. In the Timekeeping Mode, hold down [C] until the seconds start to flash, which indicates the setting screen.
2. Be sure to configure the correct UTC differential for your Home Site before configuring any other Timekeeping Mode settings.
3. See the “UTC Differential/City Code List” for information about the UTC differential settings that are supported.
4. Press [A] to move the flashing in the sequence shown below to select other settings.

Thermometer Screen
- Press [A] to toggle between the thermometer screen and the temperature tendency screen.
- The tide graph shows tidal movements for the current date in accordance with the current time as kept in the Timekeeping Mode.
- The Moon phase indicator shows the current Moon phase in accordance with the current time as kept in the Timekeeping Mode.
- See “Thermometer” for details about the thermometer screen and temperature tendency graph.

Temperature Tendency Screen
- Press [A] to toggle between the thermometer screen and the temperature tendency screen.
- The tide graph shows tidal movements for the current date in accordance with the current time as kept in the Timekeeping Mode.
- The Moon phase indicator shows the current Moon phase in accordance with the current time as kept in the Timekeeping Mode.
- See “Thermometer” for details about the thermometer screen and temperature tendency graph.

Temperature Data
- Recall Mode
- Stopwatch Mode
- World Time Mode
- Alarm Mode
- Countdown Timer Mode

3. When the setting you want to change is flashing, use [L] and [R] to change it as described below.

Screen | To do this | Do this:
--- | --- | ---
Thermometer Screen | Reset the seconds to 00 | Press [L].
| Toggle between Daylight Saving Time (DST) and Standard Time (ST) | Press [R].
| Specify the UTC differential | Use [B] (+) and [B] (–) to change it.
| Change the hour or minutes | Use [B] (+) and [B] (–) to change it.
| Toggle between 12-hour (12H) and 24-hour (24H) timekeeping | Press [L].
| Change the year | Use [B] (+) and [B] (–) to change it.
| Change the month or day | Use [B] (+) and [B] (–) to change it.

- The UTC differential setting range is –12.0 to +14.0, in 0.5-hour units.
- For information about settings other than the time and date, see the following.
  - Temperature Sensor Calibration: “Thermometer”
  - Temperature Unit: “Thermometer”

4. Press [C] twice to exit the setting screen.

- The 12-hour/24-hour timekeeping format you select in the Timekeeping Mode is applied in all modes.
- The day of the week is displayed automatically in accordance with the date (year, month, and day) settings.
- When DST is turned on, the UTC differential setting range is –11.0 to +15.0, in 0.5-hour units.
- Any time the seconds setting is changed, the analog hands are adjusted accordingly.
- See “Daylight Saving Time (DST) Setting” below for details about the DST setting.

Daylight Saving Time (DST) Setting
- Daylight Saving Time (summer time) advances the time setting by one hour from Standard Time. Remember that not all countries or even local areas use Daylight Saving Time.

To toggle the Timekeeping Mode digital time between DST and Standard Time
1. In the Timekeeping Mode, hold down [C] until the seconds start to flash, which indicates the setting screen.
3. Press [L] to toggle between Daylight Saving Time (DST) and Standard Time (ST) displayed.
4. Press [R] twice to exit the setting screen.

- The DST indicator appears on the Timekeeping, Tide/Moon Data, Alarm, and Hand Setting Mode screens to indicate that Daylight Saving Time is turned on. In the case of the Tide/Moon Data Mode, the DST indicator appears on the Tide Data screen only.

Home Site Data
- Moon phase, tide graph data, and Tide/Moon Data Mode data will not be displayed properly unless Home Site data (UTC differential, longitude, and local time interval) is configured correctly.
- The UTC differential indicates the time difference with Greenwich, England.
- The letters UTC is the abbreviation for Coordinated Universal Time, which is the world-wide scientific standard of timekeeping. It is based upon carefully maintained atomic (cesium) clocks that keep time accurately to within microseconds. Leap seconds are added or subtracted as necessary to keep UTC in sync with the Earth’s rotation.
To return to the Timekeeping Mode, press to display the Timekeeping Mode.

The minute hand will be adjusted slightly to match the seconds when you exit the setting screen.

To specify a date

1. In the Tide/Moon Data Mode, hold down until the year setting starts to flash, which indicates the setting screen.
2. Press to display the longitude value setting screen.
3. Press to move the flashing in the sequence shown below to select the other settings.
   • You can specify a date in the range of January 1, 2000 to December 31, 2099.
4. Press to exit the setting screen.
5. Use to display either the Tide Data screen or the Moon Data screen.

This watch uses a temperature sensor to measure temperature. A reading is taken during each even-numbered minute, and the result of the last reading is displayed on the thermometer screen.

The watch also takes separate readings and stores them in memory for display in the temperature tendency graph, which can be viewed in the Timekeeping Mode. Measured temperature values are stored in memory for later recall when you need them.

Thermometer Screen

Press to display the temperature tendency graph, which is one of the displays in the Timekeeping Mode.

The watch also takes separate readings and stores them in memory for display in the temperature tendency graph, which can be viewed in the Timekeeping Mode. Measured temperature values are stored in memory for later recall when you need them.

Temperature Tendency Graph

The watch also takes temperature readings at the top and at the bottom of each hour and stores the results in memory for display on the temperature tendency graph. Depending on the current Timekeeping Mode, the temperature tendency graph shows the top or bottom of the temperature tendency graph.

Latest measurement value

The horizontal axis of the graph represents time, the rightmost column is the newest temperature value in memory, while the leftmost column is the temperature value stored approximately 17 hours ago (1 dot = 1 hour). The vertical axis of the graph represents the relative change from one hour to the next.

The thermometer screen displays temperature values in 6.7°C units (or 12°F units). The display range of the thermometer screen is –10.0°C to 60.0°C (or 14.0°F to 140.0°F).

You can calibrate the thermometer sensor if you feel that the displayed temperature values are not correct. See "Temperature Sensor Calibration" for more information.

Important!

Temperature measurements are affected by your body temperature (while you are wearing the watch), direct sunlight, and moisture. To achieve a more accurate temperature measurement, remove the watch from your wrist, place it in a well ventilated location out of direct sunlight, and wipe all moisture from the case. It takes approximately 20 to 30 minutes for the case of the watch to reach the actual surrounding temperature.

Temperature Tendency Graph

The watch also takes temperature readings at the top and at the bottom of each hour and stores the results in memory for display on the temperature tendency graph. Depending on the current Timekeeping Mode, the temperature tendency graph shows the top or bottom of the temperature tendency graph.

Latest measurement value

The horizontal axis of the graph represents time, the rightmost column is the newest temperature value in memory, while the leftmost column is the temperature value stored approximately 17 hours ago (1 dot = 1 hour). The vertical axis of the graph represents the relative change from one hour to the next.

When the relative change from one hour to the next exceeds +10.0°C (+18.0°F), the dot at the highest point for the applicable hour flashes.

When the relative change from one hour to the next exceeds –10.0°C (–18.0°F), there is no dot in the applicable hour's column.

If a measurement error occurs for some reason, only a single dot in the center column will be displayed.
Recalling Temperature Data
The measurements the watch takes at the top and the bottom of each hour are stored in memory automatically. Memory can hold up to 50 measurement records. You can use the Temperature Data Recall Mode to recall memory data when you need it.

- Temperature data records are assigned numbers automatically starting from 01.
- When there are already 50 records in memory, a new temperature reading causes the oldest record (record number 50) to be deleted automatically to make room for the new data. The new data is assigned record number 1, and all of the numbers of all the other records (01 to 49) are incremented by 1 (becoming 02 through 50).

To recall temperature records
1. In the Timekeeping Mode, press \( \text{REC \#} \) to enter the Temperature Data Recall Mode.
   - This displays the newest record currently in memory.
2. Press \( \text{REC \#} \) and \( \text{REC \#} \) (–) to scroll through the records.
3. Pressing \( \text{REC \#} \) while the oldest record is displayed will scroll to the newest record.
4. If a temperature measurement operation is performed while a record is displayed, the displayed record's number will be incremented by 1.
5. If an error occurs during temperature measurement, \( \text{REC \#} \) will be shown for the temperature value in the corresponding record.

Stopwatch
The stopwatch lets you measure elapsed time, split times, and two finishes.
- The display range of the stopwatch is 99 hours, 59 minutes, 59.99 seconds.
- The stopwatch continues to run, restarting from zero after it reaches its limit, until you stop it.
- All of the operations in this section are performed in the Stopwatches Mode, which you enter by pressing \( \text{STOP} \).

To measure times with the stopwatch

<table>
<thead>
<tr>
<th>Elapsed Time</th>
<th>Stop</th>
<th>Re-start</th>
<th>Stop</th>
<th>Clear</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start</td>
<td>Split</td>
<td>Split release</td>
<td>Stop</td>
<td>Clear</td>
</tr>
</tbody>
</table>

Countdown Timer
You can set the countdown timers within a range of one minute to 100 hours. An alarm sounds when the countdown reaches zero.

- You can also select auto-repeat, which automatically restarts the countdown from the original value you set whenever zero is reached.
- All of the operations in this section are performed in the Countdown Timer Mode, which you enter by pressing \( \text{C-TIME} \).

To use the countdown timer
Press \( \text{C-TIME} \) while in the Countdown Timer Mode to start the countdown timer.
- When the countdown reaches zero, the alarm sounds for 10 seconds or until you stop it by pressing any button. The countdown timer is automatically reset to its starting value after the alarm stops.
- When auto-repeat is turned on, the countdown timer continues to run, restarting from zero when it reaches its limit, until you stop it.
- All of the operations in this section are performed in the Stopwatches Mode, which you enter by pressing \( \text{STOP} \).

To configure countdown start time and auto-repeat settings
1. While the countdown timer is on the display in the Countdown Timer Mode, hold down \( \text{C-TIME} \) until the hour setting of the countdown timer starts to flash, which indicates the setting screen.
2. If the countdown start time is not displayed, use the procedure under “To use the countdown timer” to display it.
3. Press \( \text{C-TIME} \) to move the flashing in the sequence shown below, and select the setting you want to change.

Auto-repeat on/indicator

<table>

</tr>
</tbody>
</table>

Alarm
When the alarm is turned on, the watch beeps when the alarm time is reached. You can set an hourly or a daily alarm.

1. In the Alarm Mode, hold down \( \text{ALM} \) until the hour setting of the alarm time starts to flash, which indicates the setting screen.
2. This operation turns on the alarm automatically.
3. Press \( \text{ALM} \) to move the flashing between the hour and minute settings.
4. While a setting is flashing, use \( \text{ALM} \) and \( \text{ALM} \) (–) to change it.

To set the alarm time
1. In the Alarm Mode, hold down \( \text{ALM} \) until the hour setting of the alarm time starts to flash, which indicates the setting screen.
2. This operation turns on the alarm automatically.
3. Press \( \text{ALM} \) to move the flashing between the hour and minute settings.
4. While a setting is flashing, use \( \text{ALM} \) and \( \text{ALM} \) (–) to change it.

World Time
The World Time Mode digitally displays the current time in 50 cities (30 time zones) around the world.
- The times kept in the World Time Mode are synchronized with the time being kept in the Timekeeping Mode. If you feel that there is an error in any World Time Mode time, check the UTC differential of your Home City Time Zone and the current setting of the Timekeeping Mode.
- Select a city code in the World Time Mode to display the current time in any particular time zone around the world. See the “UTC Differential/City Code List” for information about the UTC differential settings that are supported.
- All of the operations in this section are performed in the World Time Mode, which you enter by pressing \( \text{WORLD} \).

To view the time in another city
While in the World Time Mode, press \( \text{WORLD} \) to scroll eastward through the city codes (time zones) or \( \text{WORLD} \) to scroll westward.

To toggle a city code time between Standard Time and Daylight Saving Time
1. In the World Time Mode, use \( \text{ALM} \) and \( \text{ALM} \) to display the city code (time zone) whose Standard Time/Daylight Saving Time setting you want to change.
2. Hold down \( \text{ALM} \) to toggle between Daylight Saving Time (DST indicator displayed) and Standard Time (DST indicator not displayed).

Illumination
This watch has an EL (electro-luminescent) panel that causes the entire display to glow for easy reading in the dark. The watch’s auto light switch turns on automatically when you angle the watch towards your face.

- The auto light switch must be turned on (indicated by the auto light switch on indicator) for it to operate.
- See “Illumination Precautions” for other important information about using illumination.

To turn on illumination manually
In any mode, press \( \text{I} \) to illuminate the display for about 1.5 seconds.
- The above operation turns on illumination regardless of the current auto light switch setting.
About the Auto Light Switch

Turning on the auto light switch causes illumination to turn on, whenever you position your watch as described below in any mode, except for the Hand Setting Mode setting screen.

Moving the watch to a position that is parallel to the ground and then tilting it towards you more than 40 degrees causes illumination to turn on.

• Wear the watch on the outside of your wrist.

Warning!

• Always make sure you are in a safe place whenever you are reading the display of the watch using the auto light switch. Be especially careful when running or engaged in any other activity that can result in accident or injury. Also take care that sudden illumination by the auto light switch does not startle or distract others around you.

• When you are wearing the watch, make sure that its auto light switch is turned off before riding on a bicycle or operating a motorcycle or any other motor vehicle. Sudden and unintended operation of the auto light switch can create a distraction, which can result in a traffic accident and serious personal injury.

To turn the auto light switch on and off

In the Timekeeping Mode, hold down (A) for about three seconds to toggle the auto light switch on (+) or off (–). The auto light switch on indicator (+) is displayed in all modes while the auto light switch is turned on.

In order to protect against running down the battery, the auto light switch will turn off automatically approximately six hours after you turn it on. Repeat the above procedure to turn the auto light switch back on if you want to.

Reference

This section contains more detailed and technical information about watch operation. It also contains important precautions and notes about the various features and functions of this watch.

Moon Phase Indicator

The Moon phase indicator of this watch indicates the current phase of the Moon as shown below.

- The Moon phase indicator shows the Moon as viewed at noon from a position in the Northern Hemisphere looking south. Note that at times this image shown by the Moon phase indicator may differ from that of the actual Moon in your area.
- The left-right orientation of the Moon phase is reversed when viewing from the Southern Hemisphere or from a point near the equator.

Moon Phases and Moon Age

The Moon goes through a regular 29.53-day cycle. During each cycle, the Moon appears to wax and wane as the relative positioning of the Earth, Moon, and Sun changes. The longer the angular distance between the Moon and the Sun, the more we see illuminated.

- The angle to the Moon in relation to the direction at which the Sun is visible from the Earth.

This watch performs a rough calculation of the current Moon age starting from day 0 of the moon age cycle. Since this watch performs calculations using integer values only (no fractions), the margin for error of the displayed Moon age is ± 1 day.

Tide Graph

The wave on the watch's tide graph indicates the current tide.

- The tide graph displayed by this watch is based on the current Moon age.
- Remember that the margin for error of the Moon age displayed by this watch is ± 1 day. The greater the error in a particular Moon age, the greater the error in the resulting tide graph.

Lunilud Interval

Theoretically, high tide is at the Moon's transit over the meridian and low tide is about six hours later. Actual high tide occurs somewhat later, due to factors such as the angle of the Moon above the horizon, the distance between the Moon and Earth, and the Lunitidal Interval. When setting the lunilud interval for this watch, use the time differential between the Moon's transit over the meridian until high tide.

Thermometer

Temperature Sensor Calibration

The temperature sensor built into the watch is calibrated at the factory and normally requires no further adjustment. If you notice serious errors in the temperature readings produced by this watch, you can calibrate the sensor to correct the errors.

- Incorrectly calibrating the temperature sensor can result in incorrect readings. Carefully read the following before doing anything.
- Compare the readings produced by the watch with those of another reliable and accurate thermometer.
- If adjustment is required, remove the watch from your wrist and wait for 20 or 30 minutes to give the watch time to stabilize.

To calibrate the temperature sensor

1. In the Timekeeping Mode, hold down (D) until the seconds start to flash, which indicates the setting screen.
2. Press (A) nine times to display the temperature sensor calibration screen.
3. Use (C) and (D) to change the calibration value.
   - You can change the value in 0.1°C (0.2°F) steps, in a range of ±10°C (±18°F).
   - The calibration value shows “+” or “−” when the setting is outside the allowable range.
   - To return the calibration value to its default (no calibration, indicated by a “−” or “+”), press (C) and (D) at the same time.
4. Temperature sensor calibration will not be possible if the current reading is outside the allowable display range (−10.0°C/14.0°F to 60.0°C/140.0°F) and the calibration value shows “+” or “−”.
5. Setting a sensor calibration value does not affect temperature values that are already stored in memory.

4. After configuring the setting you want, press (E) twice to exit the setting screen.

To specify the temperature display unit

1. In the Timekeeping Mode, hold down (A) until the seconds start to flash, which indicates the setting screen.
2. Press (C) 10 times to display the temperature unit setting screen.
3. Use (D) to switch between Celsius (°C) and Fahrenheit (°F).
   - The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C). The initial factory default and the initial default after battery replacement is Celsius (°C).
4. After configuring the setting you want, press (E) twice to exit the setting screen.

Auto Return Feature

- If you leave a screen with flashing digits on the display without performing any operation for two or three minutes, the watch saves any settings you have made up to that point and exits the setting screen automatically.
- The watch will change to the Timekeeping Mode automatically if you do not perform any operation in the Tides/Moon Data Mode, Temperature Data Recall Mode, Alarm Mode, or Hand Setting Mode for two or three minutes.

Button Operation Tone

In any mode (except when a setting screen is on the display), hold down (F) for about three seconds to toggle the button operation tone on or off. The button operation tone off indicator (-) is displayed while the tone is turned off.
- If the button operation tone is turned off, the daily alarm and countdown timer alarm continue to sound when required.

Data and Setting Scrolling

The (G) and (H) buttons are used in various modes and setting screens to scroll through data on the display. In most cases, holding down these buttons during a scroll operation scrolls through the data at high speed.

Timekeeping

- Resetting the seconds to 00 while the current count is in the range of 30 to 59 causes the minutes to be increased by 1. In the range of 00 to 29, the seconds are reset to 00 without changing the minutes.
- With the 24-hour format, the PM indicator appears on the display for times in the range of noon to 11:59 p.m. and the AM indicator appears for times in the range of midnight to 11:59 a.m.
- With the 24-hour format, times are displayed in the range of 00:00 to 23:59, without any indicator.
- The year can be set in the range of 1970 to 2099.
- All World Time Mode times are calculated from the current time in the Timekeeping Mode.

World Time

- The seconds count of the World Time is synchronized with the seconds count of the Timekeeping Mode.
- All World Time Mode times are calculated from the current time in the Timekeeping Mode using UTC time differential values.

- The UTC differential is a value that indicates the time difference between a reference point in Greenwich, England and the time zone where a city is located.
- The letters UTC is the abbreviation for Coordinated Universal Time, which is the world-wide scientific standard of timekeeping. It is based on atomic (cesium) clocks that keep time accurately to within microseconds. Leap seconds are added or subtracted as necessary to keep UTC in sync with the Earth's rotation.
Illumination Precautions
- The electroluminescent panel that provides illumination loses power after very long use.
- Illumination may be hard to see when viewed under direct sunlight.
- The watch may emit an audible sound whenever the display is illuminated. This is due to vibration of the EL panel used for illumination, and does not indicate malfunction.
- Illumination turns off automatically whenever an alarm sounds.
- Frequent use of illumination runs down the batteries.

Auto light switch precautions
- Avoid wearing the watch on the inside of your wrist. Doing so causes the auto light switch to operate when it is not needed, which shortens battery life. If you want to wear the watch on the inside of your wrist, turn off the auto light switch feature.
- Illumination may not turn on if the face of the watch is pointed more than 15 degrees above or below parallel. Make sure that the back of your hand is parallel to the ground.
- Illumination turns off in about one second, even if you keep the watch pointed towards your face.
- Under certain conditions, illumination may not turn on until about one second after you turn the face of the watch towards you. This does not necessarily indicate malfunction of the auto light switch.
- You may notice a faint clicking sound coming from the watch when it is shaken back and forth. This sound is caused by mechanical operation of the auto light switch, and does not indicate a problem with the watch.
