## Operation Guide 4700

## Getting Acquainted

Congratulations upon your selection of this CASIO watch. To get the most out of your purchase, be sure to read this manual carefully.
Caution!
Your watch is shipped with it Auto Display feature (which continually changes the contents of the digital display) turned on. Calibration signal reception is disabled while Auto Display is turned on.
Press any button to turn off Auto Display and return to the Timekeeping Mode.

## About This Manual

For the sake of simplicity, the sample displays in this manual do not show the analog hands of the watch - Button operations are indicated using the letters shown in the illustration
Each section of this manual provides you with the information you need to perform operations in each mode. Further details and technical information can be found in the "Reference" section

World Time Mode
Stopwatch Mode

Hand Setting Mode
Alarm Mode

Radio-controlled Atomic Timekeeping

Current Time Setting
This watch automatically adjusts its time setting in accordance with a time calibration signal. You can also perform a manual procedure to set the time and date, when necessary.

- The first thing you should do after purchasing this watch is to set your Home City, which is the city where you will normally use the watch. For more information, see When using the watch in an
When using the watch in an area that is outside of the range of the transmitters in Rugby and Mainflingen, you need to manually adjust the time as required. See
"Timekeeping" for information about manual settings. the analog time setting is automatically adjusted whenever you change the digital setting. See "Analog Timekeeping" for more information.
To set your Home City

1. In the Timekeeping Mode, hold down (A) until the city code starts to flash, which indicates the setting screen 2. Use (D) (east) and (B) (west) to scroll through the city codes until the one you want to use as your Home City

- The following are the city codes for major cities in the Western Europe time zones.
LIS: Lisbon
LON: London
LON: London, Dublin, Casablanca, Dakar, Abidjan BCN: Barcelona
MAD: Madrid
MAD: Madrid
PAR: Paris
MIL: Milan
ROM: Rome
BER: Berlin
STO: Stockholm, Amsterdam, Algiers, Hamburg, Frankfurt, Vienna
ATH: Athens,Cairo, Jerusalem, Helsinki, Istanbul, Beirut, Damascus,Cape Town ATH: Athens,Cairo, Jerusalem, Helsinki, Istanbul, Beirut, Damascus,C
MOW*: Moscow, Jeddah, Kuwait, Riyadh, Aden, Addis Ababa, Nairobi
*The area covered by the MOW city code is quite far from the time calibration signal transmitters, and so certain conditions may cause problems with signa reception.

3. Press (A) to exit the setting screen.

- Normally, your watch should show the correct time as soon as you select your Home City Code. If it does not, it should adjust automatically after the next auto receive (in the middle of the night). You can also perform manual receive or you can set the time manually.
If you are in an area that does not use Daylight Saving Time (summer time), turn off the DST setting
The watch will receive the time calibration signal automatically from the applicable information (in the middle of the night) and update its settings accordingly. For "Transmitters".
To display the digital time
- In the Timekeeping Mode, press (A) to cycle through the digital time screens as shown below.

To display the last signal screen

- Press (C) to display the last signal screen.
- The date and time of the last successful time calibration signal reception alternate on the display at two-second intervals.

Time Calibration Signal Reception
There are two different methods you can use to receive the time calibration signal: auto receive and manual receive.

- Auto Receive

With auto receive, the watch receives the time calibration signal automatically up to six times a day. When any auto receive is successful, the remaining auto receive
operations are not performed. For more information, see "About Auto Receive".

- Manual Receive

Manual receive lets you start a time calibration signal reception with the press of a button. For more information, see "To perform manual receive".

## Important!

- When getting ready to receive the time calibration signal, position the watch as shown in the nearby illustration, with its 12 o'clock side facing towards a window. Make sure there are no metal objects nearby.

- Make sure the watch is facing the right way.
- Proper signal reception can be difficult or even impossible under the conditions listed

- Signal reception is normally better at night than during the day
- Time calibration signal reception takes from two to seven minutes, but in some cases it can take as long as 14 minutes. Take care that you do not perform any button operations or move the watch during this time.
Reception Ranges

## Operation Guide 4700

- At distances further than about 500 kilometers from a transmitter, signal reception may not be pessibe during certain times of year or times of day Radio interforence may not be possible during certain times of year or times of day. Radio interfer
may also cause problems with reception.
- Even when the watch is within the reception range of the transmitter, signal reception will be impossible if the signal is blocked by mountains or other geological formations between the watch and signal source.
- Signal reception is affected by weather, atmospheric conditions, and seasonal
changes.
- See the information under "Signal Reception Troubleshooting" if you experience problems with time calibration signal reception.

## About Auto Receive

With auto receive, the watch receives the time calibration signal automatically up to six times a day. When any auto receive is successful, the remaining auto receive operations are not performed. The start times of the auto receive operations depend on the current Home City and DST settings.

| Home City |  | Auto Receive Start Times |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1 | 2 | 3 | 4 | 5 | 6 |
| $\begin{array}{\|l\|} \hline \text { LIS } \\ \text { LON } \end{array}$ | Standard Time Daylight Saving Time | $\begin{aligned} & \hline \text { 1:00 am } \\ & \text { 2:00 am } \end{aligned}$ | $\begin{aligned} & \text { 2:00 am } \\ & \text { 3:00 am } \end{aligned}$ | $\begin{aligned} & \hline \text { 3:00 am } \\ & \text { 4:00 am } \end{aligned}$ | $\begin{aligned} & \text { 4:00 am } \\ & \text { 5:00 am } \end{aligned}$ | 5:00 am Midnight | Midnight 1:00 am next day |
| BCN <br> MAD <br> PAR <br> MIL <br> ROM <br> BER <br> STO | Standard Time <br> Daylight Saving Time | $\begin{aligned} & \text { 2:00 am } \\ & \text { 3:00 am } \end{aligned}$ | $\begin{aligned} & \text { 3:00 am } \\ & \text { 4:00 am } \end{aligned}$ | $\begin{aligned} & \text { 4:00 am } \\ & \text { 5:00 am } \end{aligned}$ | 5:00 am <br> Midnight | Midnight <br> 1:00 am <br> next day | 1:00 am next day 2:00 am next day |
| ATH | Standard Time <br> Daylight Saving Time | $\begin{aligned} & \hline \text { 3:00 am } \\ & \text { 4:00 am } \end{aligned}$ | 4:00 am <br> 5:00 am | 5:00 am <br> Midnight |  | 1:00 am next day 2:00 am next day $\qquad$ | 2:00 am next day next day |
| MOW | Standard Time <br> Daylight Saving Time | $\begin{aligned} & \text { 4:00 am } \\ & \text { 5:00 am } \end{aligned}$ | 5:00 am <br> Midnight next day | Midnight next day 1:00 am next day | 1:00 am next day 2:00 am next day | 2:00 am next day 3:00 am next day | 3:00 am next day 4:00 am next day |

- The display of the watch is blank while an auto receive operation is in progress. - Auto receive is performed only if the watch is in the Timekeeping Mode or World
Time Mode when one of the calibration times is reached. It is not performed if a Time Mode when one of the calibration times is reached. It is not performed if a
calibration time is reached while an alarm is sounding, or while you are configuring calibration time is reached while an alarm is sounding, or while you are config
settings (while settings are flashing on the display). - Auto receive of the calibration signal is designed to be performed early in the morning, while you sleep (provided that the Timekeeping Mode time is set correctly) Before going to bed for the night, remove the watch from your wrist, and put it in location where it can easily receive the signal.
When auto receive is turned on, the watch receives the calibration signal for two to
seven minutes everyday when the time in the Timekeeping Mode reaches each of the seven minutes everyday when the time in the Timekeeping Mode reaches each of the
six calibration times. Avoid performing any button operation within seven minutes before or after any of the six calibration times. Doing so can interfere with correct calibration.
- Remember that reception of the calibration signal depends on the time kept in the digital display. Reception will be performed whenever the display shows one of the six calibration times, regardless of whether or not the displayed time is actually the correct time.

To perform manual receive

1. Place the watch on a stable surface so its top (12 o'clock side) is facing towards a window. 2. In the Timekeeping Mode, hold down (D) for about two seconds until the watch beeps.
2. After you release (D) the display will show the letters FIGi. This indicates that signal reception is in progress.

- Time calibration signal reception normally takes from two to seven minutes. Take care that you do not perform any button operations or move the watch during this time
- After signal reception is complete, the display of the watch changes to the last signal Note
Note
- To interrupt a reception and return to the Timekeeping Mode, press (D).

If reception is unsuccessful, the message EFF: appears on the display for one or
two minutes. After that, the watch returns to the Timekeeping Mode. screen by pressing (D).
About the Receiving Indicator (Manual receive)
The receiving indicator shows the strength of the calibration signal being received. Fo best reception, be sure to keep the watch in a location where signal strength is strongest.

- Even in an area where signal strength is strong, it takes about 10 seconds for signa reception to stabilize enough for the receiving indicator to indicate signal strength. - Use the receiving indicator as a guide for checking signal strength and for finding the best location for the watch during signal reception.
- The Level 3 receiving indicator remains on the display in all modes following reception of the time calibration signal and calibration of the watch's time setting. The Level 3 receiving indicator is not displayed if signal reception was unsuccessful or after manual adjustment of the current time setting.
The Level 3 receiving indicator inducaes that at least one of the six calibration signal ceive operations was successful. Note, however, that the Level 3 receiving ndicator is cleared from the display when the first auto receive operation of the day is performed.

To turn auto receive on and off
In the Timekeeping Mode, press (C) to display the last signal screen.
Mode if you will automatically return to the Timekeeping or two minutes after displaying the last signal screen.
2. Hold down (A) until the current auto receive setting flashes on the display. This is the setting screen. - If the auto receive setting does not appear when you hold down (A), it means that the city code currently selected for the Home City is for an area that does not support calibration signal reception.
auto receive on or off in this case.
3. Use (D) to turn auto receive on (Dld) or off (EFF).
4. Press (A) to exit the setting screen.

- To return to the Timekeeping Mode from the last signal screen, press (D)
- For information about city codes that support signal reception, see "To set your Home City".

Signal Reception Troubleshooting
Check the following points whenever you experience problems with signal reception. Note

| Problem | Probable Cause | What you should do |
| :---: | :---: | :---: |
| Cannot perform manual receive. | - The watch is not in the Timekeeping Mode. <br> - Your current Home City is not one of the following city codes: LIS, LON, BCN, MAD, PAR, MIL, ROM, BER, STO, ATH, or MOW | - Enter the Timekeeping Mode and try again. <br> - Select LIS, LON, BCN, MAD, PAR, MIL, ROM, BER, STO, ATH, or MOW as your Home City. |
| Auto receive is turned on, but the Level 3 receiving indicator does not appear on the display. | - You changed the time setting manually. <br> - You were performing some button operation during the auto receive. <br> - Even if reception is successful, the Level 3 receiving indicator disappears every day when the first auto receive operation of the day is performed. | - Perform manual receive or wait until the next auto signal receive is performed. <br> - Check to make sure the watch is in a location where it can receive the signal. |
| Time setting is incorrect following signal reception. | - If the time is one hour off, the DST setting may be incorrect. <br> - The Home City code setting is not correct for the area where you are using the watch. | - Change the DST setting to Auto DST. <br> - Select the correct Home City code. |

- For further information, see "Important!" under "Time Calibration Signal Reception" and "Radio-controlled Atomic Timekeeping Precautions".

## World Time

The World Time Mode digitally displays the current time in 48 cities ( 29 time zones) around the world. If the currentime shown ior a city is wrong, check your make the necessary changes
The watch will perform a signal reception even if it is in the World Time Mode when a calibration time is reached. If this happens, the World Time Mode time settings will be adjusted in accordance with the
All of the operations in this City time.
World Time Morations in this section are performed in the
selected city World Time Mode, which you enter by pressing (C).
To view the time in another city
While in the World Time Mode, press (D) to scroll through the city codes (time zones) to the east.

- For full information on city codes, see the "City Code Table".

To toggle a city code time between Standard Time and Daylight Saving Time DST indicator $\begin{gathered}\text { 1. In the World Time Mode, use (D) to display the city code } \\ \text { (time zone) whose Standard Time/Daylight Saving Time }\end{gathered}$ setting you want to change
 setting you want to change.
(C) $\overline{\mathbf{j}} \mathrm{i}$ (D) not displayed)

Note that you cannot use the World Time Mode to change the DST setting of the Home City code you currently have selected in the Timekeeping Mode. See "To change the Daylight Saving Time (summer time) setting" for information about
turning the Home City code DST setting on and off.

- The DST indicator will appear on the display whenever you display a city code for which Daylight Saving Time is turned on.
- Note that the DST/Standard Time setting affects only the currently displayed city code. Other city codes are not affected.

Stopwatch

The stopwatch lets you measure elapsed time - The display range of the stopwatch is 59 minutes, 59.99 seconds.
The stopwatch continues to run, restarting from zero after it reaches its limit, until you stop it.
if you exit the measurement operation continues even - All of the operations in this section are performed in the 1/100 second Minutes Stopwatch Mode, which you enter by pressing (C).
To measure times with the stopwatch
Elapsed Time

## Operation Guide 4700

Alarm time (Hour: Minutes)

Hourly time signal
on indicator
Alarm on indicator
To set the alarm time

1. In the Alarm Mode, hold down (A) until the hour setting of the alarm time starts to flash, which indicates the setting screen.

- This operation automatically turns on the alarm.
. Press (C) to move the flashing between the hour and minute settings.
. While a setting is flashing, use (D) $(+)$ and (B) $(-)$ to change it.
When setting the alarm time using the 12-hour format, take care to set the time 4. Press (A) to exit the setting screen.

## Alarm Operation

The alarm sounds at the preset time for about 10 seconds, regardless of the mode the watch is in.

- To stop the alarm tone after it starts to sound, press any button.

To test the alarm
In the Alarm Mode, hold down (D) to sound the alarm.
To turn the Daily alarm and the Hourly Time Signal on and off
In the Alarm Mode, press (D) to cycle through the settings shown below.
Alarm On Indicator / Hourly Time Signal On Indicator

- The alarm on indicator and the Hourly Time Signal on indicator are shown on the display in all modes while these functions are turned on

Illumination

An LED (light-emitting diode) and light guide panel illuminate the digital display for easy reading in the dark. information.

To turn on illumination
In any mode, press (B) to illuminate the display

## Timekeeping

Use the Timekeeping Mode to set and view the current time and date. This section also explains how to manually set the current date and time.
All of the operations in this section are performed in the Timekeeping Mode, which you can enter by pressing (C)

When the alarm is turned on, the alarm sounds when the alarm time is reached. You can also turn on an Hourly Time Signal, which will cause the watch to beep twice every hour on the hour.

- All of the operations in this section are performed in the Alarm Mode, which you enter by pressing (C).
etting the Digital Time and Date Manually
Make sure you select your Home City code before you change the current time and date settings. World Time Mode times are all displayed in accordance with the Timekeeping Mode settings. Because correct if you do not select the proper Home City code before setting the time and
date in the Timekeeping Mode.
To set the current digital time and date manually

1. In the Timekeeping Mode, hold down (A) until the city

code starts to flash, which indicates the setting screen. 2. Press (C) to move the flashing in the sequence shown below to select other settings.

City code

3. When the setting you want to change is flashing, use (B) and/or (D) to change it as

| Screen: | To do this: | Do this: |
| :---: | :---: | :---: |
| BEFi | Change the city code | Use (D) (east) and (B) (west). |
|  | Cycle between Daylight Saving Time (以ा), Standard Time (WFF), and Auto DST (FIUTD) | Press (D). |
| \| | Toggle between 12-hour ( I E ) and 24-hour ( E 4 H ) timekeeping | Press (D). |
| 3 J | Reset the seconds to | Press (D). |
|  | Change the hour or minutes | Use ( ${ }^{\text {( }}$ (+) and (B) ( - . |
| 피IT ! | Change the year |  |
| 톨:.! | Change the month or day |  |

- See "City Code Table" for a complete list of available city codes.

4. Press (A) to exit the setting screen.

When you exit the setting screen, the analog hands are adjusted automatically to match the digital time. See "Analog Timekeeping" for more information

Note $\quad$ Auto DST ( $\overline{\text { FiLiiiju }}$ ) can be selected only while LIS, LON, BCN, MAD, PAR, MIL, ROM, BER, STO, ATH, or MOW is selected as the Home City code. For more information, see "Daylight Saving Time (DST)" below.

## Daylight Saving Time (DST)

Daylight Saving Time (summer time) advances the digital time setting by one hour from Standard Time. Remember that not all countries or even local areas use Daylight Saving Time.
The time calibration signal transmitted from Rugby and Mainflingen includes both Standard Time and DST data. When the Auto DST setting is turned on, the watch switches between Standard Time and DST (summer time) automatically in accordance with the received time signal.

- Auto DST (AUTO) can be selected only while LIS, LON, BCN, MAD, PAR, MIL,

ROM, BER, STO, ATH, or MOW is selected as the Home City code.

- The default DST setting is Auto DST (Filli) whenever you select LIS, LON, BCN

MAD, PAR, MIL, ROM, BER, STO, ATH, or MOW as your Home City code.

- If you experience problems receiving the time calibration signal in your area, it is probably best to switch between Standard Time and Daylight Saving Time (summer ime) manually.
To change the Daylight Saving Time (summer time) setting

1. In the Timekeeping Mode, hold down (A) until the city code starts to flash, which 2. Press (C)

DST setting screen appears.
3. Use (D) to cycle through the DST settings in the sequence shown below.

$$
\begin{array}{|c|c|}
\hline \text { Auto DST (i: } \mathrm{i} \cup \mathrm{Ti}) & \text { DST off (OFF) } \rightarrow \text { DST on (OM) } \\
\hline
\end{array}
$$

4. When the setting you want is selected, press (A) to exit the setting screen.
5. When the setting you want is selected, press (A) to exit the setting screen.

- The DST indicator (DST) appears on the display to indicate that Daylight Saving Time

## Analog Timekeeping

The analog time of this watch is synchronized with the digital time. The analog time setting is adjusted automatically whenever you change the digital time.
Note

- The hands for the analog timepiece move to adjust to a new setting whenever any he following occurs.

When you change the digital time setting manually
When the digital time setting is changed by time calibration signal reception
When you change the Home City code and/or DST setting

- If the analog time does not match the digital time for any reason, use the procedure described under "To adjust the analog time" to match the analog setting to the digita setting.
- Whenever you need to adjust both the digital and the analog time settings manually,
make sure you adjust the digital setting first.
move in order to adjust to the digital time, it may take some time before they stop moving.
To adjust the analog time

1. In the Timekeeping Mode, press (C) five times to enter the Hand Setting Mode.
. Hold down (A) until the current digital time starts to , Dind Bates the setting screen Use (D) and (B) to adjust the analog setting as
described below.

| When you want to do this: | Perform this button operation: |
| :--- | :--- |
| Move the hand setting <br> forward 20 seconds | - Press (D). |
| Move the hand setting a short <br> way forward at high speed | - Hold down (D). <br> - Release (D) when the hands reach the setting <br> you want. |
| Move the hand setting a <br> long way forward at high <br> speed | - While holding down (D) to move the hands at <br> high speed, press (B) to lock the high-speed <br> hand movement. <br> - To stop the hand movement, press any <br> button. <br> - Hand movement stops automatically if the hour <br> hand makes one full (12-hour) revolution. |

4. Press (A) to exit the setting screen.

- The minute hand will be adjusted slightly to match the seconds when you exit the setting screen.
- To return to the Timekeeping Mode, press ©

## Operation Guide 4700

## Reference

This section contains more detailed and technical information about watch operation. It also contains important precautions and notes about the various features and functions of this watch.

## Auto Display

Auto Display continually changes the contents of the digital display
To turn off Auto Display
Press any button to turn off Auto Display. This returns to the Timekeeping Mode. To turn on Auto Display
In the Hand Setting Mode, hold down (D) for about three seconds until the watch beeps.
Note

- Calibration signal reception is disabled while Auto Display is being performed.
- Auto Display cannot be performed while a setting screen is on the display.

## Auto Return Features

- If you leave the watch in the Alarm or Hand Setting Mode for two or three minutes without performing any operation, it automatically returns to the Timekeeping Mode. If you leave the watch with a flashing setting on the display for two or three minutes without performing any operation, the watch automatically exits the setting screen.

## Scrolling

(B) and (D) are used in various modes and setting screens to scroll through data on the display. In most cases, holding down these buttons during a scroll operation scrolls through the data at high speed.

Initial Screens
When you enter the World Time Mode, the data you were viewing when you last exited the mode appears first.

Radio-controlled Atomic Timekeeping Precautions

- The display of the watch is blank while an auto receive operation is in progress.
- Strong electrostatic charge can result in the wrong time being set
- The time calibration signal bounces off the ionosphere. Because of this, such factors as changes in the reflectivity of the ionosphere, as well as movement of the nosphere to higher altitudes due to seasonal atmospheric changes or the time of day may change the reception range of the signal and make reception temporarily impossible
the time time calibration signal is received properly, certain conditions can cause The current time setting in up to one second.
over any time settings you accordance with the time calibration signal takes priority
- The watch is designed to automatically update the date and day of the week for the period January 1, 2000 to December 31, 2099. Setting of the date by the time calibration signal cannot be performed starting from January 1, 2100.
- This watch can receive signals that differentiate between leap years and non-leap years.
- Though this watch is designed to receive both time data (hour, minutes, seconds) and date data (year, month, day), certain signal conditions can limit reception to time data only.
- Normally, the signal reception date shown by the last signal screen is the date data included in the received time calibration signal. When only time data is received, however, the last signal screen shows the date as kept in the Timekeeping Mode at the time of signal reception.
- If you are in an area where proper time calibration signal reception is impossible, the watch keeps time within $\pm 20$ seconds a month at normal temperature.
- If you have problems with proper time calibration signal reception or if the time setting is wrong after signal reception, check your current city code, DST (summer
time), and auto receive settings. The following are the initial factory defalts for the time), and auto receive settings. The following are the initial factory defaults for these settings

| Setting | Initial Factory Default |  |
| :--- | :--- | :---: |
| City code | BER $\quad$ (Berlin) |  |
| DST (summer time) | HST |  |
|  | HIIIII (Auto switching) |  |
| Auto receive | ON (Auto receive) |  |

## Transmitters

The time calibration signal received by this watch depends on the currently selected Home City code.

When LIS, BCN, MAD, PAR, MIL, ROM, BER, STO, ATH, or MOW is selected as the Home City code:

| In this case: | The watch does this: |
| :--- | :--- |
| The first signal search operation after <br> the Home City code has been changed | 1. Checks the Mainflingen signal first. <br> 2. If the Mainflingen signal cannot be <br> received, checks the Rugby signal. |
| The second and subsequent signal <br> searches | 1. Checks the signal of the transmitter of the <br> first receive operation (Rugby or <br> Mainflingen). <br> 2. If the checked signal cannot be received, <br> checks the other signal. |

When LON is selected as the Home City code:

| In this case: | The watch does this: |
| :--- | :--- |
| The first signal search operation after <br> the Home City code has been changed | 1. Checks the Rugbby signal first. <br> 2. If the Rugby signal cannot be received, <br> checks the Mainflingen signal. |
| The second and subsequent signal <br> searches | 1. Checks the signal of the transmitter of the <br> first receive operation (Rugby or <br> Mainflingen). <br> 2. If the checked signal cannot be received, <br> checks the other signal. |

Timekeeping

- Resetting the seconds to $\mathbf{0 0}$ while the current count is in the range of 30 to 59 causes the minutes to be increased by 1 . In the range of 00 to 29 , the seconds are
reset to 00 without changing the minutes.
- The day of the week is automatically displayed in accordance with the date (year month, and day) settings.
- The watch's built-in full automatic calendar makes allowances for different month lengths and leap years. Once you set the date, there should be no reason to change
- The current time for all city codes in the Timekeeping Mode and World Time Mode is calculated in accordance with the Greenwich Mean Time (GMT) differential for each city, based on your Home City time setting.
- GMT differential is calculated by this watch based on Universal Time Coordinated * (UTC*) data.

UTC is the world-wide scientific standard of timekeeping. It is based upon carefully maintained atomic (cesium) clocks that keep time accurately to within microseconds. Leap seconds are added or subtracted as necessary to keep UTC in sync with the Earth's rotation. The reference point for UTC is Greenwich, England.
12-hour/24-hour Timekeeping Formats
The 12-hour/24-hour timekeeping format you select in the Timekeeping Mode is also applied in all other modes.

- With the 12 -hour format, the PM indicator ( $\mathbf{P}$ ) appears on the display for times in the range of noon to 10 "' 9 p.m. and no indicator appears for times in the range of midnight to 11:59 a.m.
- With the 24 -hour format, times are displayed in the range of $0: 00$ to $23: 59$, without any indicator.

## Illumination Precautions

- Illumination may be hard to see when viewed under direct sunlight.
- Frquat un autically turns off whenever an alarm sounds.

Button Operation Tone
In any mode (except when a setting screen is on the display), hold down (C) for abou three seconds to toggle the button operation tone on and off. The button operation tone off indicator ( MUTE ) is displayed while the tone is turned off.

- Even if the button operation tone is turned off, the daily alarm and the hourly time signal continue to sound when required.

City Code Table

| $\begin{aligned} & \text { City } \\ & \text { Code } \end{aligned}$ | City | $\begin{gathered} \text { GMT } \\ \text { Differential } \end{gathered}$ | Other major cities in same time zone |
