MA0804-EA

Operation Guide 5028

Getting Acquainted

Congratulations upon your selection of this CASIO watch. To get the most out of your purchase, be sure to read this manual carefully and keep it on hand for later reference.

Warning!

- The longitude, lunitidal interval, Moon phase indicator and tide graph data that appear on the display of this watch are not intended for navigation purposes. Always use proper instruments and resources to obtain data for navigation purposes.
- This watch is not an instrument for calculating low tide and high tide times. The tide graph of this watch is intended to provide a reasonable approximation of tidal movements only.
- CASIO COMPUTER CO., LTD. assumes no responsibility for any loss, or any claims by third parties that may arise through the use of this watch.
- Button operations are indicated using the letters shown in the illustration.
- For the sake of simplicity, the sample displays in this manual do not show the analog hands of the watch.
- Each section of this manual provides you with the information you need to perform operations in each mode. Further details and technical information can be found in the “Reference” section.

About This Manual

- Button operations are indicated using the letters shown in the illustration.
- For the sake of simplicity, the sample displays in this manual do not show the analog hands of the watch.
- Each section of this manual provides you with the information you need to perform operations in each mode. Further details and technical information can be found in the “Reference” section.

General Guide

- Press • to change from mode to mode.
- In any mode (except when a setting screen is on the display), press • to illuminate the face of the watch.

Timekeeping

This watch features separate digital and analog timekeeping. The procedures for setting the digital time and analog time are different.
- The Moon phase indicator shows the current Moon phase in accordance with the current date as kept in the Moon/Tide Data Mode.
- The tide graph shows tidal movements for the current date in accordance with the current date as kept in the Tide Graph Mode.

Important!

- Be sure to configure the current time and date, and your Home Site data (data for the site where you use the watch) correctly before using the functions of this watch. See “Home Site Data” for more information.

Digital Time and Date

Use the Timekeeping Mode to set and view a digital display of the current time and date. When setting the digital time, you can also configure settings for summer time (Daylight Saving Time) or DST.

To set the digital time and date

1. In the Timekeeping Mode, hold down • until the seconds start to flash, which indicates the setting screen.
2. Press • to move the flashing in the sequence shown below to select the other settings.
3. When the setting you want to change is flashing, use • and • to change it as described below.

**Screen**

Use to do this

Reset the seconds to 00

Press •

Toggle between Daylight Saving Time (DST) and Standard Time (STD)

Press •

Change the hour or minutes

Use • (+) and • (-)

Change the year

Press •

Change the month or day

Press •

4. Press • twice to exit the setting screen.
- The first press of • displays the UTC differential setting screen. Pressing • again exits the setting screen.
- Resetting the seconds only (without changing the DST, hour, or minute setting) causes the analog minute hand setting to be adjusted automatically.
- See “Digital Time Daylight Saving Time (DST) Setting” below for details about the DST setting.
- The day of the week is displayed automatically in accordance with the date (year, month, and day) settings.

Digital Time Daylight Saving Time (DST) Setting

Daylight Saving Time (summer time) advances the digital time setting by one hour from Standard Time. Remember that not all countries or even local areas use Daylight Saving Time.
To toggle the Timekeeping Mode digital time between DST and Standard Time

1. In the Timekeeping Mode, hold down • until the seconds start to flash, which indicates the setting screen.
2. Press • once to display the DST setting screen.
3. Press • to toggle between Daylight Saving Time (DST) displayed and Standard Time (STD) displayed.
4. Press • twice to exit the setting screen.

The DST indicator appears on the Timekeeping, Moon/Tide Data, Alarm, and Hand Setting Mode screens to indicate that Daylight Saving Time is turned on. In the case of the Moon/Tide Data Mode, the DST indicator appears on the tide data screen only.

Home Site Data

Moon phase, tide graph data, and Moon/Tide Data Mode data will not be displayed properly unless Home Site data (UTC differential, longitude, and lunitidal interval) is configured correctly.
- The UTC differential is a value that indicates the time difference between a reference point in Greenwich, England and the time zone where a city is located.
- The letters “UTC” is the abbreviation for “Coordinated Universal Time”, which is the world-wide scientific standard of timekeeping. It is based upon carefully maintained atomic (cesium) clocks that keep time accurately to within microseconds. Leap seconds are added or subtracted as necessary to keep UTC in sync with the Earth’s rotation.
- The lunitidal interval is the time elapsing between the Moon’s transit over a meridian and the next high tide at that meridian. See “Lunitidal Interval” for more information.
- This watch displays lunitidal intervals in terms of hours and minutes.
- The “Site/Lunitidal Interval Data List” at the back of this manual provides UTC differential and longitude information around the world.
- The following is the initial factory default Home Site data (Tokyo, Japan) when you first purchase the watch, and whenever you have the batteries replaced. Change these settings to match the area where you normally use the watch.
UTC differential (+9.8): Longitude (East 140 degrees): Lunitidal interval (5 hours, 20 minutes)

To configure Home Site data

1. In the Timekeeping Mode, hold down • until the seconds start to flash, which indicates the setting screen.
2. Press • again to display the UTC differential setting screen.
3. Press • to move the flashing in the sequence shown below to select either setting.

**Screen**

Use to do this

Reset the seconds to 00

Press •

Toggle between Daylight Saving Time (DST) and Standard Time (STD)

Press •

Change the hour or minutes

Use • (+) and • (-)

Change the year

Press •

Change the month or day

Press •

4. Press • twice to exit the setting screen.
- The first press of • displays the UTC differential setting screen. Pressing • again exits the setting screen.
- Resetting the seconds only (without changing the DST, hour, or minute setting) causes the analog minute hand setting to be adjusted automatically.
- See “Digital Time Daylight Saving Time (DST) Setting” below for details about the DST setting.
- The day of the week is displayed automatically in accordance with the date (year, month, and day) settings.
4. When the setting you want to change is flashing, use \( \text{A} \) and \( \text{B} \) to change it as described below.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Screen</th>
<th>Button Operations</th>
</tr>
</thead>
<tbody>
<tr>
<td>UTC Differential</td>
<td>( + ) and ( - ) to change setting.</td>
<td></td>
</tr>
<tr>
<td>Longitude Value</td>
<td>( + ) and ( - ) to change setting.</td>
<td></td>
</tr>
<tr>
<td>East Longitude</td>
<td>( + ) and ( - ) to change setting.</td>
<td></td>
</tr>
<tr>
<td>Limited Interval Hours, Minutes</td>
<td>( + ) and ( - ) to change setting.</td>
<td></td>
</tr>
</tbody>
</table>

- When the digital time DST setting is on, the UTC differential can be set in a range of \(-11.0\) to \(+15.0\) in 0.5-hour units.
- To toggle between 12-hour and 24-hour timekeeping
  - Press \( \text{C} \).
  - With the 24-hour format, the (PM) indicator appears to the left of the hour digits for times in the range of noon to 11:59 p.m. and the A (AM) indicator appears to the left of the hour digits for times in the range of midnight to 11:59 a.m.
- Setting the Analog Time
  - Press \( \text{C} \) to enter the Timekeeping Mode.
  - When auto-repeat is turned on, the countdown will restart automatically after the alarm stops.

3. While a setting is flashing, use \( \text{A} \) (+) or \( \text{B} \) (-) to change it.

- You can specify a date in the range of January 1, 2000 to December 31, 2099.
- Use \( \text{C} \) to display either the tide data screen or the Moon data screen.

Stopwatch

The stopwatch lets you record elapsed time, split times, and two finishes.

1. To set the stopwatch:
   - Press \( \text{C} \) to enter the Stopwatch Mode.
   - The stopwatch measurement operation continues even if you exit the Stopwatch Mode.

To specify a date

1. In the Moon/Tide Data Mode, hold down \( \text{D} \) until the year setting starts to flash, which indicates the setting screen.
2. Press \( \text{E} \) to move the flashing in the sequence shown below to select the other settings.

![Month → Day → Year](image)

3. While a setting is flashing, use \( \text{A} \) (+) or \( \text{B} \) (-) to change it.

- You can specify a countdown start time of 24 hours, set \( \text{C} \) to do this:
  - To specify a countdown start time of 24 hours, set \( \text{C} \) to do this:
    - Do this:
      - While the tide data screen is displayed, press \( \text{D} \) to advance to the next hour.
      - While the moon data screen is displayed, press \( \text{D} \) to advance to the next day.
      - You can also specify a particular date (year, month, day) to view its tide data and moon data. See “To specify a date” for more information.
      - When you enter the Moon/Tide Data Mode, the screen (tide data or moon data) that was displayed the last time you exited the mode appears first.

To set up the countdown timer

1. While the countdown start time is on display in the Countdown Timer Mode, press \( \text{F} \) until the hour setting of the countdown start time starts to flash, which indicates the setting screen.
2. Press \( \text{G} \) to start the countdown timer.
3. To completely stop a countdown operation, first pause it (by pressing \( \text{F} \)), then press \( \text{G} \). This returns the countdown time to its starting value.

To measure times with the stopwatch

1. In the Timekeeping Mode, press \( \text{H} \) to enter the stopwatch.
2. Press \( \text{I} \) to start or stop the stopwatch.
3. Press \( \text{J} \) to split a time.
4. Press \( \text{K} \) to stop the stopwatch.
5. Press \( \text{L} \) to display the time of the stopwatch.

Moon/Tide Data

Moon phase indicator

Tide graph

Year Month Day

Tide Data Screen

To view the current Moon/Tide Data Mode data

In the Moon/Tide Data Mode, press \( \text{M} \) to toggle between the tide data screen and the Moon data screen.

- The tide graph shows the tide for the currently displayed time. The initial tide data screen shows the level for 6:00 a.m. The Moon data screen shows the Moon age and Moon phase for the current date.

- The tide data screen is displayed, press \( \text{N} \) to advance to the next hour.

- The Moon data screen is displayed, press \( \text{N} \) to advance to the next day.

- You can also specify a particular date (year, month, day) to view its tide data and moon data. See “To specify a date” for more information.

- When you enter the Moon/Tide Data Mode, the screen (tide data or moon data) that was displayed the last time you exited the mode appears first.

To use the countdown timer

Press \( \text{M} \) while in the Countdown Timer Mode to start the countdown timer.

- When the end of the countdown is reached and auto-repeat is turned off, the alarm sounds for 10 seconds or until you stop it by pressing any button. The countdown time is automatically reset to its starting value after the alarm stops.
- When auto-repeat is turned on, the countdown will restart automatically without pressing \( \text{M} \) after it reaches zero.

- To completely stop a countdown operation, first pause it (by pressing \( \text{M} \)), then press \( \text{N} \). This returns the countdown time to its starting value.

Frequent use of auto-repeat and the alarm can run down batteries power.
To test the alarm

Set the day, hour and minutes for the alarm time. This type of setting causes the alarm to sound at the specific time, on the specific date you set.

Monthly alarm

Set the month, day, hour and minutes for the alarm time. This type of setting causes the alarm to sound everyday at the time you set.

4. While a setting is flashing, use (+) and (-) to change it.
   - To set an alarm that does not include a month (daily alarm, monthly alarm), set for the month. Use (D) and (C) until the “—” mark appears (between 12 and 1) while month setting is flashing.
   - To set an alarm that does not include a day (daily alarm, 1-month alarm), set “—” for the day. Use (C) and (D) until the “—” mark appears (between the end of the month and 1) while the day setting is flashing.
   - When setting the alarm time using the 12-hour format, take care to set the time within one time period.

5. Press to exit the setting screen.

Alarm Operation

The alarm tone sounds at the preset time for 10 seconds, regardless of the mode the watch is in. In the case of the snooze alarm, the alarm operation is performed a total of seven times, every five minutes, until you turn off the alarm or change it to a one-time alarm.

To stop the alarm tone after it starts to sound, press any button.

Performing any one of the following operations during a 5-minute interval between snooze alarms cancels the current snooze alarm operation.

Displaying the Timekeeping Mode setting screen

Displaying the Alarm setting screen

To test the alarm

In the Alarm Mode, hold down to sound the alarm.

To turn Alarm 1 and 2, and the Hourly Time Signal on and off

1. In the Alarm Mode, use (D) to select one time alarm (alarm number 1 or 2) or the Hourly Time Signal (OF).
2. Press (+) to toggle it on and off.
3. Turning on a one-time alarm (1 or 2) displays the alarm on indicator on its screen.
4. Turning on the Hourly Time Signal displays the hourly time signal on indicator.
5. The alarm on (ALM) indicator and Hourly Time Signal on (SIG) indicator are displayed in all modes.

To select the operation of Alarm 1

1. In the Alarm Mode, use (C) to select Alarm 1.
2. Press (+) to cycle through the available settings in the sequence shown below.

- SHZ indicator flashes during the 5-minute intervals between alarms.
- Displaying the Alarm 1 setting screen while the snooze alarm is turned off automatically turns off the snooze alarm (making Alarm 1 a one-time alarm).

Dual Time

The Dual Time Mode lets you keep track of time in a different time zone. You can select Standard Time or Daylight Saving Time for the Dual Time Mode.

To set the Dual Time

1. Press (A) to enter the Dual Time Mode.
2. In the Dual Time Mode, hold down (D) until the DST setting starts to flash, which indicates the setting screen.
3. Press to move the flashing in the sequence shown below to select the other settings.

Illumination

This has an EL (electro-luminescent) panel that causes the entire display to glow for easy reading in the dark.

To illuminate the face of the watch

In any mode (except when a setting screen is on the display), press (+) to illuminate the face of the watch.

You can use the procedure below to select either 1.5 seconds or 3 seconds as the illumination duration. When you press (+), the illumination will remain on for about 1.5 seconds or 3 seconds, depending on the current illumination duration setting.

To specify the illumination duration

1. In the Timekeeping Mode, hold down (D) until the minutes start to flash, which indicates the setting screen.
2. While the seconds are flashing, press (+) to toggle the illumination duration between 1.5 seconds (-) and 3 seconds (1).
3. Press twice to exit the setting screen.

Reference

This section contains more detailed and technical information about watch operation. It also contains important precautions and notes about the various features and functions of this watch.

Moon Phase Indicator

The Moon phase indicator of this watch indicates the current phase of the Moon as shown below.

Moon Age

The Moon goes through a regular 29.53-day cycle. During each cycle, the Moon appears to wax and wane as the relative positioning of the Earth, Moon, and Sun changes. The greater the angular distance between the Moon and the Sun, the more we see illuminated.

- The angle to the Moon in relation to the direction at which the Sun is visible from the Earth.

This watch performs a rough calculation of the current Moon age starting from day 0 of the moon age cycle. Since this watch performs calculations using integer values only (no fractions), the margin for error of the displayed Moon age is ±1 day.
Tide Graph

The Tide Graph has six graphic segments, each of which indicates a different tide level. The current tide level is indicated by the displayed graphic segment.

Tidal Movements

Tides are the periodic rise and fall of the water of oceans, seas, bays, and other bodies of water caused mainly by the gravitational interactions between the Earth, Moon and Sun. Tides rise and fall about every six hours. The tide graph of this watch indicates tidal movement based on the Moon’s transit over a meridian and the lunitidal interval. The lunitidal interval differs according to your current location, so you must specify a lunitidal interval in order to obtain the correct tide graph readings.

• The tide graph displayed by this watch is based on the current Moon age. Remember that the margin for error of the Moon age displayed by this watch is ±1 day. The greater the error in a particular Moon age, the greater the error in the resulting tide graph.

Lunitidal Interval

Theoretically, high tide is at the Moon’s transit over the meridian and low tide is about six hours later. Actual high tide occurs somewhat later, due to factors such as viscosity, friction, and underwater topography. Both the time differential between the Moon’s transit over the meridian until low tide are known as the ‘lunitidal interval’. When setting the lunitidal interval for this watch, use the time differential between the Moon’s transit over the meridian until high tide.

Button Operation Tone

The button operation tone sounds any time you press one of the watch’s buttons. You can turn the button operation tone on or off as desired.

• Even if you turn off the button operation tone, the alarm, Hourly Time Signal, and Countdown Timer Mode alarm all operate normally.

To turn the button operation tone on and off

In any mode (except when a setting screen is on the display), hold down to toggle the button operation tone on or off as displayed. The indicator is displayed in all modes when the button operation tone is turned on.

Auto Return Features

• If you leave a screen with flashing digits on the display for two or three minutes without performing any operation, the watch automatically exits the setting screen.

Scrolling

The and buttons are used in various modes and setting screens to scroll through data on the display. In most cases, holding down these buttons during a scroll operation scrolls through the data at high speed.

Timekeeping

• Resetting the seconds to while the current count is in the range of 30 to 59 causes the minutes to be increased by 1. In the range of 00 to 29, the seconds are reset to 00 without changing the minutes.

• The year can be set in the range of 2000 to 2099.

• The watch’s built-in full automatic calendar makes allowances for different month lengths and leap years. Once you set the date, there should be no reason to change it except after you have replaced the watch’s batteries.

Illumination Precautions

• Illumination may be hard to see when viewed under direct sunlight.

• Illumination automatically turns off whenever an alarm sounds.

• Frequent use of illumination runs down the batteries.
